In October 2021, a total of 26,092 movements were observed at 7 Flow Monitoring Points (FMPs). This represents an increase of 35 per cent in comparison with October 2020 (6 months after the country’s first case of COVID-19) when 19,392 movements were observed.

Out of the total observed movements, 41% were forced movements: 17% due to natural disaster (64% of them originated from Somalia), 12% due to food insecurity (66% of them originated from Ethiopia) and another 12% due to conflict (76% of them originated from Ethiopia).

During the reporting month, 66% of the people on the move reported being aware of the COVID-19 pandemic. Those who reported not being in the know about COVID-19 were offered an awareness raising session by DTM’s trained enumerators utilizing posters in Somali, Oromo, Amharic, Arabic and English.

Incoming flows: 11,749 movements were observed as entering Somalia. Movements recorded originated from Ethiopia (65%), Kenya (12%), Djibouti (5%) and Yemen (1%), while 17 per cent of the movements observed as entering Somalia also originated from Somalia.

Outgoing flows: 14,343 movements were observed as exiting Somalia. The main countries of intended destination for outgoing flows were Ethiopia (41%), Saudi Arabia (36%), Kenya (10%), Djibouti (9%) and Yemen (3%).

AWARENESS OF THE COVID-19 PANDEMIC, SYMPTOMS AND PROTECTION MEASURES¹

Aware of respondents listed handwashing as the main protection measure against COVID-19

66%

DIFFICULTIES RELATED TO COVID-19

- No challenges: 41%
- Difficulty with access to basic services (food, water, etc.): 22%
- Difficulty with access to health care services: 22%
- Difficulty in travelling due to COVID-19 restrictions: 17%
- Difficulty with keeping a job / other activity: 15%
- Difficulty with sending / receiving remittances: 14%
- Difficulty with access to Personal Protective Equipment (PPE): 13%
- Other: 8%
- Worse food quality / less money spent on food: 7%

SEX AND SOURCES OF INFORMATION ON COVID-19

- Family / friends: 58%
- Media (radio, newspapers, TV, social, etc.): 54%
- Medical staff: 46%
- Local / national authorities: 37%
- Civil society / NGOs: 37%
- UN or other international organizations: 10%

IF COVID-19 VACCINATION WAS AVAILABLE TO YOU, WOULD YOU WANT TO GET VACCINATED?*

No: 48%
Yes: 52%

* Data from FMS which is based on a sample size of 2,077 individuals.

¹ Sources: Ministry of Health, Federal Government of Somalia and UN OCHA.
² Data on difficulties related to COVID-19 is based on an FMS sample of 2,077 respondents of the total movements. Data on difficulty with sending/receiving remittances is based on an FMS sample of 288 respondents who reported facing this particular challenge. Other difficulties also include discrimination/stigmatization, family/friends infected with COVID-19 and dead, and respondent infected with COVID-19 and recovered. Data should be interpreted with caution.
³ Data on awareness of COVID-19 is based on FMR data (26,092 observed movements in August 2021).
The Displacement Tracking Matrix (DTM) is a system to track and monitor displacement and population mobility. It is designed to regularly and systematically capture, process and disseminate information to provide a better understanding of the movements and evolving needs of mobile populations, whether on site or en route. DTM provides decision makers with primary data and information on human mobility, both in-country and at the regional and global level.

Flow monitoring is one of DTM’s four methodological components. Its purpose is to provide regular and updated information of the size and profile of population movements. The information and analysis provided by flow monitoring also aims to contribute to improved understanding of shortcomings and priorities in the provision of assistance along the displacement/migratory routes. Flow monitoring methodology consists of three basic steps:

- **High Mobility Area/Location Assessments**: aimed at mapping locations of high mobility to establish where to set up Flow Monitoring Points (FMPs) through key informant interviews;
- **Flow Monitoring Registry (FMR)**: aimed at capturing quantitative data about certain characteristics such as the volumes of migrants, their nationalities, sex and age disaggregated information, their origin, their planned destination and key vulnerabilities. This is collected by enumerators at the FMPs. Since 22 March 2020, the tool includes COVID-19-related indicators, such as awareness of COVID-19 and the prevalence of chronic diseases. In March 2021, the FMR tool was modified to capture the distinctions between transiting locations and places of origin, transiting destinations and final destinations thus the incoming/outgoing flows from March 2021 may not be directly comparable with the previous weeks and months;
- **Flow Monitoring Survey (FMS)**: aimed at capturing qualitative information about the profiles of migrants, migration drivers and migrants’ needs. This is done through interviews with a sample of migrants passing through the FMPs. Since 1 September 2020, the tool includes COVID-19-related indicators, such as the challenges encountered since the start of the pandemic.

Movement categories:

- **Outgoing/Exiting Migrants**: migrants originating from and travelling out of the country where the FMP is located. Nationality is irrelevant.
- **Transiting Migrants**: migrants travelling through the country where the FMP is located, where both departure point, and the intended final destination, are not the country of FMP. Nationality is irrelevant.
- **Incoming Migrants**: both entering (non-nationals of the country with the FMP) and returning (nationals of the country with the FMP) migrants, where the intended destination is the country containing the FMP.
- **Internal Migrants**: where both the departure and the destination country are the country with the FMP. This includes circular migration.

More information on flow monitoring data and reports can be accessed via DTM’s Flow Monitoring portal. Access the interactive flow monitoring dashboard that presents findings from the FMR.

Data collected for this exercise (from FMR and FMS) should be understood as indicative observations at FMPs. They represent only part of the total flows passing through Somalia. DTM Somalia has seven (7) cross-border FMPs, which is not exhaustive of all cross-border roads that migrants may use.

Although data is collected daily, it is collected only during working hours. The spatial and temporal coverage of this data collection activity is therefore incomplete. However, it provides information on the situation at assessed points and allows to make hypothesis on the overall situation. In addition, having collected flow monitoring data consistently in the past years, historical data offers the possibility to observe trends and make comparisons.

Data on vulnerability is based on direct observation and should be understood as mainly indicative. FMS data is based on a sample of the total movements observed and therefore it should be interpreted with caution.
