

Impact of Covid-19 on International Flights

Weekly update | Omicron variant

Last updated : 10 January 2022

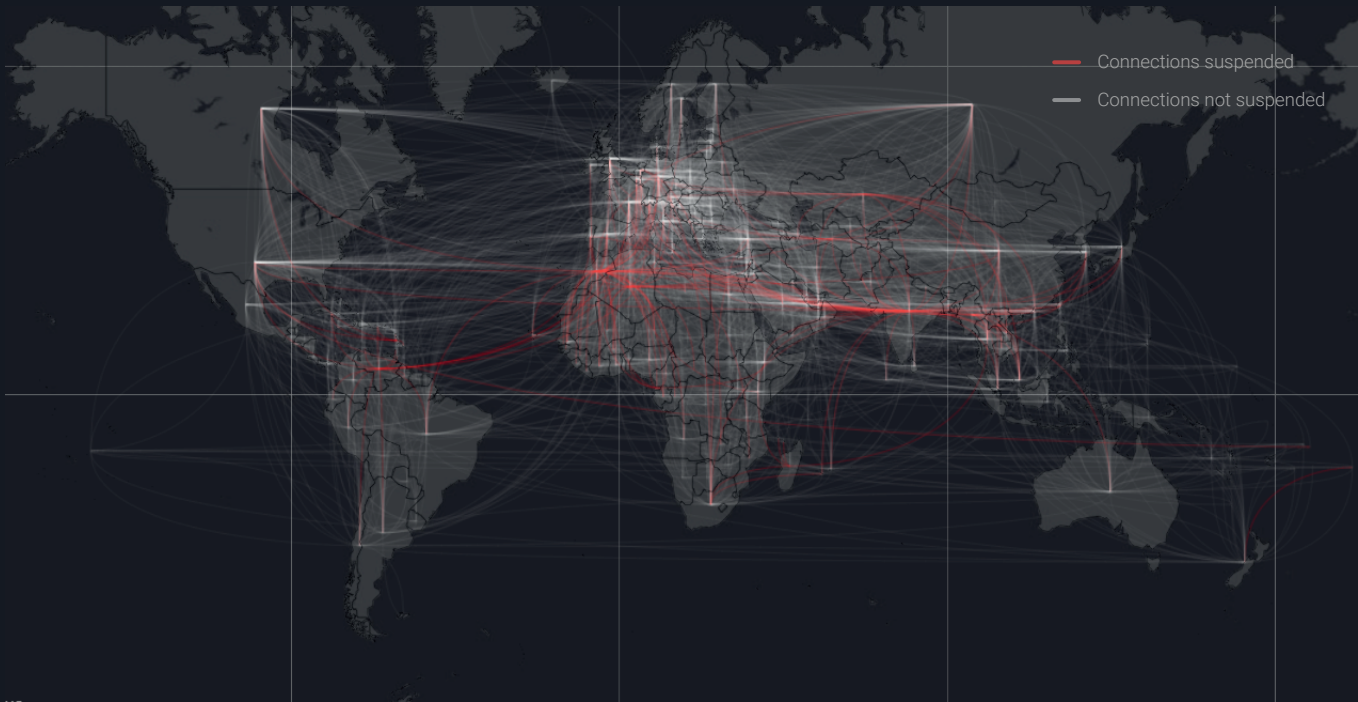

Data Source: IATA Timatic Coronavirus Outbreak updates, Government web sources, information received from IOM staff, DTM networks and trusted media outlets.

On 26 November 2021, WHO designated the variant B.1.1.529, named Omicron, a variant of concern on the advice of WHO's Technical Advisory Group on Virus Evolution (TAG-VE). Since the Omicron variant was designated, new countries, territories or areas (C/T/As) have implemented more stringent mobility restrictions for individuals. The map below shows the international air travel connections that are currently suspended.

Overview of flight suspensions over time

Number of C/T/As issuing flight suspensions

Timeline:

18 December 2020: The Alpha and Beta variants were designated variants of concern, and soon after the designation 35 C/T/As issued new flight suspensions on international flights.

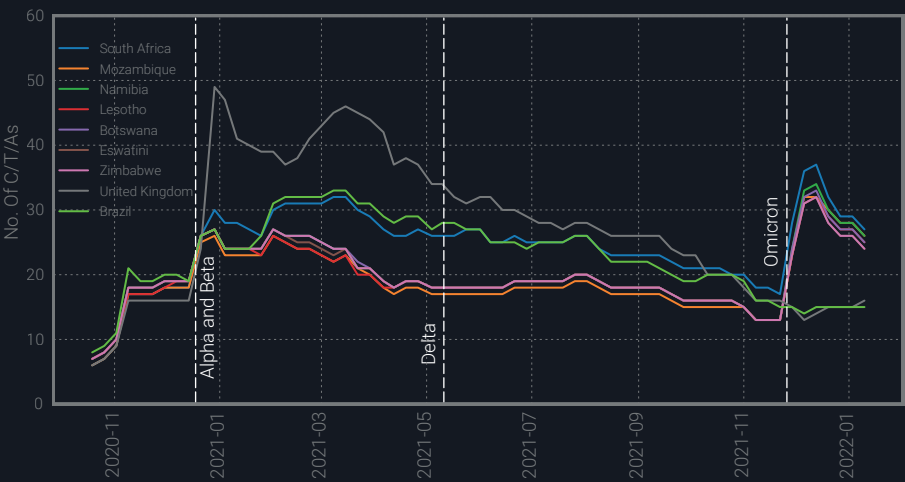

11 May 2021: The Delta variant was designated as a variant of concern, this time the number of C/T/As issuing flight suspensions fluctuated until early June, and then it started decreasing until the Omicron variant was designated.

26 November 2021: The Omicron variant was designated as a variant of concern and as a result 18 C/T/As (*) issued new flight suspensions, making a total of 34 C/T/As issuing flight suspensions as of 6 December 2021. Since 13 December 2021, Republic of Korea and Hong Kong SAR(China), have issued new flight suspensions, while 11 C/T/As (**) lifted flight suspensions.

(*) Uzbekistan, Equatorial Guinea, Morocco, Turkey, Australia, Egypt, Italy, Slovak Republic, Angola, Spain, Réunion, Caribbean Netherlands, Austria, Jordan, Rwanda, Portugal, Poland, and Malta.

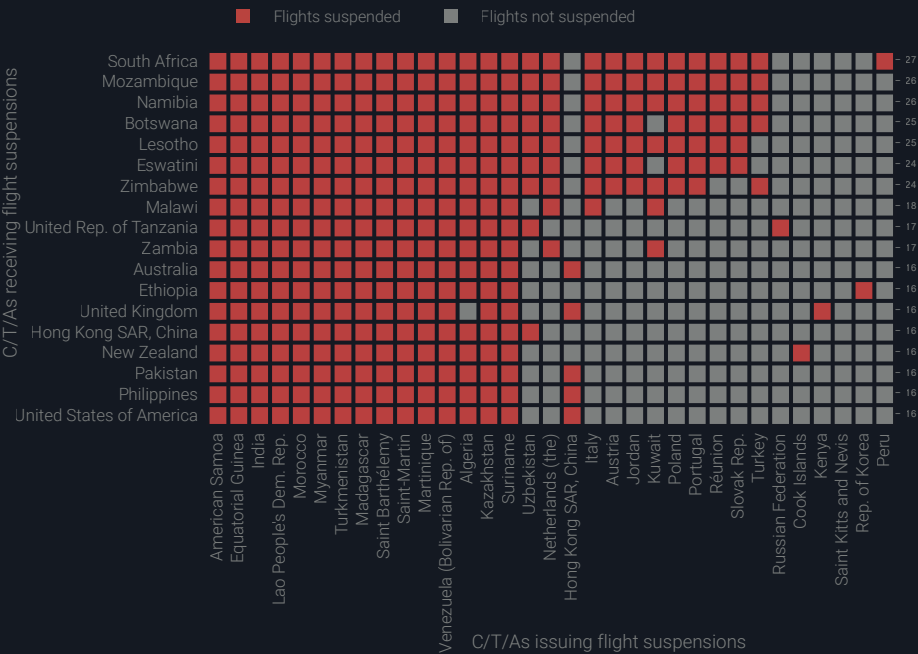

(**) Malta, Angola, Bahrain, Caribbean Netherlands, Rwanda, United Arab Emirates, United Kingdom of Great Britain and Northern Ireland, Australia, Spain, Andorra, and Egypt.

C/T/As most affected by flight suspensions

After the Alpha and Beta variants were designated as variants of concern on 18 December 2021, flight suspensions to/from specific C/T/As were issued –specially those where the variants were first documented. The United Kingdom of Great Britain and Northern Ireland received the most flight suspensions, followed by a group of South African C/T/As. The designation of the Delta variant as a variant of concern on 11 May 2021 had less of an impact on flight suspensions. When the Omicron variant was designated as a variant of concern on 26 November 2021, routes to/from South Africa were more affected than any other C/T/A in the region, with flight suspensions being issued by 27 C/T/As as of 10 January 2022.

Matrix of C/T/As receiving and issuing flight suspensions

The horizontal axis represents C/T/As issuing flight suspensions, whereas the vertical axis represents the top 7 countries receiving flight suspensions.

Southern African C/T/As are the most affected by flight suspensions. Namely, flights from/to South Africa, Namibia, Botswana, Lesotho, Eswatini, and Zimbabwe are suspended by more than 24 C/T/As. On the other hand, 7 C/T/As (American Samoa, India, Lao People's Democratic Republic, Myanmar, Equatorial Guinea, Turkmenistan, and Morocco) have cancelled all international flight connections.
