

# ZIMBABWE — TROPICAL CYCLONE IDAI RESPONSE BASELINE ASSESSMENT — ROUND 3 MANICALAND AND MASVINGO PROVINCES, DECEMBER 2019

Discussion with key informants from host community and IDPs in Chimanimani district, Ward 16, November 2019

Tropical Cyclone Idai made landfall in Zimbabwe on 15 March 2019, the country experienced floods and sustained heavy rains caused by the weather system. Through November and December 2019 IOM, in close coordination with the Government of Zimbabwe and it's partners, conducted the DTM Baseline Assessments in two provinces — Manicaland, and Masvingo. The following report provides information on the number of IDPs, returnees, shelter conditions, infrastructure damage, and populations living with host communities. An analysis of priority needs is also provided, to aid the targeting and design of future assessments.

### **SUMMARY**

During the month of November and December 2019, IOM DTM carried a baseline assessment in 12 districts affected by Cyclone Idai in Manicaland and Masvingo provinces to monitor and track the locations and priority needs of the affected populations. A total of 114 enumerators (61 female and 53 male) were engaged and carried out assessments in 336 wards.

Overall, there is still 43,352 individuals displaced due to cyclone Idai located in 1,571 locations, with the majority living in host communities within the two provinces. An estimated 10,097 homes were completely destroyed, while 37,483 homes were partially destroyed. In total 24,106 households are said to be still in need of shelter support, with only 3,047 having received emergency shelter support since the cyclone made its landfall in Zimbabwe.

Baseline assessments were done at ward level covering through focus group discussions with key informants at the ward centres in coordination with the Department of Civil Protection. Enumerators were identified at district level and trained to carry out data collection.

This report presents descriptive analysis through province and district profiles and summary statistics. In addition, a complete dataset with presented findings on ward level is available on the following link, with a corresponding map.

### **MANICALAND**

The top three needs for each ward have been aggragated by relative weight to provide a provincial analysis. The top priority is food, and shelter/housing is the second most cited need. The third highest need is drinking water, followed by health/sanitation. The relative gap in the aggregated needs implies significantly more urgency for food and shelter relief. The remaining options have been seldom mentioned by those participating in the baseline assessment.

6,934 IDP households, 36,876 individuals 15,730 males and 21,146 females

4,223 returnee households 23,626 individuals

6,710 households, 36,046 individuals live in host communities, in 1,068 locations, and 224 households, 830 individuals in camps.

## **MASVINGO PROVINCE**

The top three needs for each ward have been aggragated by relative weight to provide a provincial analysis. As in Manicaland, the top priority is food, closely followed by drinking water. This reflects the greater damage to water supplies in this province. Shelter/housing is the third highest need, followed by health/sanitation. The remaining options have been seldom mentioned by those participating in the baseline assessment.
