

## Flow Monitoring: EVD Preparedness

Publication: 15 October 2019

July 2019

15,963 people surveyed on arrival to South Sudan 3.8 average group<sup>1</sup> size

As part of IOM's Ebola Virus Disease (EVD) preparedness activities, DTM operates Flow Monitoring Points (FMPs) on the borders with Uganda (UGA), the Democratic Republic of Congo (DRC) and the Central African Republic (CAR). In total, 15 EVD-dedicated FMPs were active in July. This dashboard highlights key entry

routes to South Sudan (SSD) and presents the demographic profile of people surveyed on arrival from the three neighbouring countries at risk of EVD transmission. Participation in the survey is voluntary and the data collected is only indicative of actual flows.

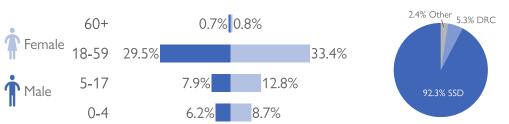

71.4% on foot **616** 13.6% motorbike

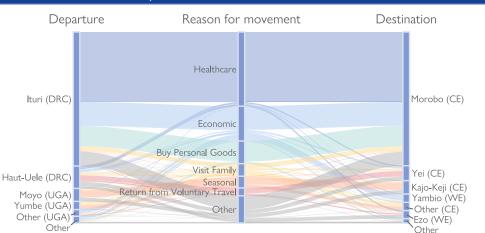

8.2% bicycle

6.8% other

Six FMPs operated on the Ugandan side of the border had to halt data collection in July due to administrative issues. As a result, flows from Uganda are under-represented and should not be compared to previous or future dashboards.

## Key insights

- A temporary interruption in data collection at the six FMPs operated on the Ugandan side of the border contributed to a 40.4% decrease in the number of individuals surveyed on arrival to South Sudan relative to June.
- 83.0% of respondents departed from DRC, 14.6% from Uganda and 2.4% from other
- countries.
- · 11,192 individuals came from Ituri (DRC), of whom less than 0.5% or 55 individuals came from Ariwara. No other individuals came from territories affected by EVD<sup>2</sup>.
- · Two individuals came from Kasese district in Uganda.

Notes: [1] Individuals travelling together are surveyed as a group, which usually corresponds to the household. [2] Territories including health zones with confirmed cases during the current outbreak (WHO). [Rounding] Percentages may not add up to 100% due to rounding error. [Map] The boundaries
