

METHODOLOGY

	Assessment conducted in affected areas
	Assessment conducted through phone interviews with key informants

SUMMARY OF THE EVENT

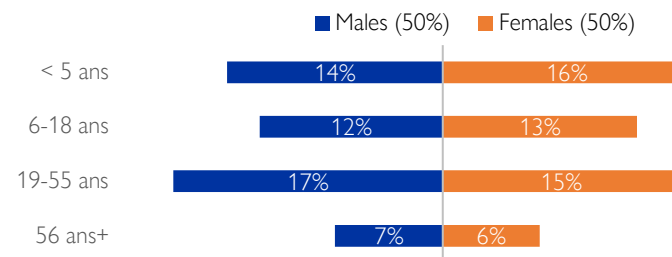

The objective of the Emergency Tracking Tool (ETT) is to collect information on large and sudden population movements as well as security and climactic emergencies. Information is collected through interviews with key informants.

Following the water rising of the Lake Chad, the village of Kinassorom (located within the islands of the Lake Chad in the *sous-prefecture* of Bol, *Département* of Mamdi, Lac Province) was flooded on **16 October 2022**. As a result, **220 households (1,440 individuals)** were displaced from the neighborhoods of Kotoko, Kanoumbouri and Haoussa to the Boudoumari neighbourhood (all these neighbourhoods are located in the village of Kinassorom). This disaster caused significant damage to houses, maize, sorghum and vegetable crops and resulted in the loss of essential household items and livestock.

Disaggregation per age and sex of displaced persons

OBSERVATIONS AND ANALYSIS

	The floods destroyed 80 houses . While some of those affected by the floods are currently being hosted by other community members, most are without shelter and sleep in the open air.
	150 hectares of maize fields, 100 hectares of sorghum and 350 hectares of other vegetable crops, which are the main sources of livelihood for this community, were completely destroyed by the floods. A total of 25 cows were also lost. As a result, humanitarian assistance is urgently needed in this situation, as no aid has been provided to the affected population.
	The 220 households (1,440 individuals) lost most of their non-food items. The most urgent non-food item needs reported, include cooking utensils, mats, soap, clothes, women's hygiene kits, blankets and water storage containers.
	Cases of malaria, typhoid fever and acute diarrhea were reported by key informants as significant health threats. Due to the lack of medicines, shelter and food, the health situation is likely to worsen.
	Vulnerable groups reported among those affected include 80 people over the age of 60 years old and 66 persons living with visible physical disabilities.
