

IOM COVID-19

IMPACT ON

KEY LOCATIONS OF

INTERNAL MOBILITY

WEEKLY ANALYSIS

24 JUNE 2020

PUBLISHER

The opinions expressed in the report are those of the authors and do not necessarily reflect the views of the International Organization for Migration (IOM). The designations employed and the presentation of material throughout the report do not imply the expression of any opinion whatsoever on the part of IOM concerning the legal status of any country, territory, city or area, or of its authorities, or concerning its frontiers or boundaries.

IOM is committed to the principle that humane and orderly migration benefits migrants and society. As an intergovernmental organization, IOM acts with its partners in the international community to assist in meeting the operational challenges of migration, advance understanding of migration issues, encourage social and economic development through migration and uphold the human dignity and well-being of migrants.

Please send any feedback, comments and suggestions related to the Covid-19 Mobility Tracking dashboards and outputs to the DTM Covid-19 Team at dtmccovid19@iom.int

Methodology & Definitions

IOM COVID-19 Impact on Key Locations of Internal Mobility Weekly Analysis is meant to serve IOM Member States, IOM, UN and voluntary partner agencies, the civil society (including media) as well as the general population in analysing the impact of COVID-19 pandemic on different key locations impacting internal mobility. It is particularly relevant when identifying and addressing specific needs faced by migrants and mobile populations, disproportionately affected by the global mobility restrictions.

The report is based on information provided by IOM field staff, using resources available at the IOM country office level and is accurate to the best of IOM's knowledge at the time of compilation. All information is being constantly validated, including the geo-location and attributes, and through regular assessments and triangulation of information. The updates depend on the time frame within which the information becomes available and is processed by IOM. For this reason, the analysis is always dated and timestamped in order to reflect the reality at a given time. However, as the situation continuously evolves and changes, despite IOM's best efforts, the analysis may not always accurately reflect the multiple and simultaneous restrictive measures being imposed at a specific location.

As the situation of the COVID-19 pandemic continues to evolve, the resulting restrictive measures issued to mitigate the spread, has become increasingly complex and varied. The IOM global mobility database has been updated in a way which reflects the varied stages of measures issued at different times by C/T/As. As such, the evolution of global restrictive measures, has resulted in varied update timelines and can explain the difference in monthly updates. Data has been collected between 13 March and 18 June 2020. Data for 25 per cent of the assessed locations has been updated since the beginning of June, while 30 per cent was last updated in May. The data for the remaining assessed internal locations was last updated before May (specifically, 27% in April and 18% in March). For more information see Table 3 in the annex.

This report provides an overview and analysis on the data from a global and regional perspective Key Locations of Internal Mobility and complements the weekly report on Points of Entry (PoE), which focuses on the impact on cross-border movements and can be found [here](#). For more detailed country-specific information and dataset used for the analysis please visit: <https://migration.iom.int/>

For further information on the methodology, definitions and explanation please refer to the [Methodology Framework](#).

Regional maps are available [here](#).

The dataset is available [here](#).

Data is collected on the following location types:

Other Key Locations of Internal Mobility:

- Internal Transit Points (internal transit point inside a given country, territory or area)
- Areas of interest (region, town, city or sub-administrative unit in a given country, territory or area with internal COVID-19 related restrictive measures, including areas with an outbreak of COVID-19 or areas under lockdown/quarantine)
- Sites with a population of interest (including stranded, repatriated and returning migrants, IDPs, nationals, asylum seekers and regular travelers, who have been affected by COVID-19 mobility restrictions at specific locations, for example hotels, temporary reception centers, camps, transit centers and detention centers)

While not included in this report, to give a comprehensive view of the COVID-19-related impact on mobility, please also refer to the weekly report on Points of Entry (PoEs) mentioned above, which assesses the impact on cross-border movements at locations such as:

- Airports (currently or recently functioning airport with a designated International Air Transport Association (IATA) code)
- Blue Border Crossing Points (international border crossing point on sea, river or lake)
- Land Border Crossing Points (international border crossing point on land, including rail)

The following operational status is captured for each assessed Internal Transit Point ¹ :

- Fully operational:
 - Open for entry and exit: all travelers can use the PoE or internal transit point.
- Partially operational:
 - Open for commercial traffic only: only transport of goods is permitted, travelers are not allowed to cross;
 - Closed for entry: travelers cannot use this location to enter the country, territory or area;
 - Closed for exit: travelers cannot use this location to leave the country, territory or area;
 - Open for returning nationals and residents only: the location is open to returning nationals and residents only, including military and humanitarian personnel and other special groups for whom entry and exit is permitted according to national procedures in place.
- Fully closed:
 - Closed for both entry and exit: no one is permitted to use the PoE or internal transit point.
- Unknown

1. Operational status is captured in the same way for all Points of Entry. For more information please refer to the weekly PoE report.

Methodology & Definitions

The report systematically captures the following types of mobility restrictions in place at assessed Internal Transit Points ²:

- Movement restricted to this location
- Movement restricted from this location
- Rules pertaining to identification and/or travel documents needed to enter or disembark at this location have changed
- Medical measures including mandatory quarantine or additional medical checks have been imposed at this location
- Requirement for medical certificate confirming a negative COVID-19 test result
- Other
- None

Additionally, more information is collected on areas of interest, specifically concerning whether:

- Public events were cancelled or postponed
- Schools were closed
- Restricted operating hours for public establishments (café, restaurant, etc.) were adopted
- Alternative working arrangements (working remotely, etc.) were implemented
- Movement outside home was restricted
- Lockdown/quarantine measures were enforced by police or military

Country/territory/area level restrictions are aggregated as following:

- Significant mobility restrictions (E.g. curfew, lockdown, state of emergency, medical requirements for international arrivals and other mobility restrictions)
- No restrictions
- Specific national measures such as: national emergency declared and mandatory quarantine of arrivals from abroad

Affected Populations:

COVID-19 mobility restrictions affect different population categories. For example, for the purpose of this report, stranded migrants are individuals unable to return as a result of mobility restrictions related to COVID-19. This could include economic migrants, students, temporary visa or work permit holders. It could also include other populations such as tourists who may be stranded owing to COVID-19-related travel restrictions. These populations may be seeking repatriation or assistance while remaining abroad.

Other affected populations include regular travelers, nationals, returnees, irregular migrants, internally displaced persons (IDPs), migrant workers and refugees. The various populations are affected in diverse ways across the different types of assessed locations, including but not limited to requirements for additional documentation, temporary relocation, quarantine or medical screening, up to an inability to continue their intended travel.

Public Health Emergency Preparedness and Response Capacities (COVID-19) at Internal Transit Points:

To understand public health emergency preparedness and response capacities with regard to the COVID-19 pandemic additional questions are asked about specific public health interventions that have been put in place in the specified locations including both internal transit points as well as PoEs. These include risk communication and community engagement, infection prevention and control, and measures to detect, manage and refer ill travelers suspected of having COVID-19, existence of standard operating procedures, health screening, presence and functionality of a referral system for suspected COVID-19 cases, and the availability of an isolation space for suspected cases before referral to designated health facility.

List of acronyms used throughout the report

- C/T/As: countries, territories or areas
- DTM: Displacement Tracking Matrix
- IDPs: Internally Displaced Persons
- PoE: Point of Entry
- p.p.: Percentage Point³
- SOPs: Standard Operating Procedures

Data is geographically aggregated by IOM Regional Offices. The list of countries under each IOM Regional Office can be found here: <https://www.iom.int/regional-offices>

2. Mobility Restrictions are captured in the same way for all Points of Entry. For more information please refer to the weekly PoE report.

3. Not to be confused with per cent, percentage point (p.p.) refers to an increase or decrease of a percentage rather than an increase or decrease in the raw number.

Executive summary

The current COVID-19 pandemic has affected global mobility both in terms of international mobility restrictions and restrictive measures on internal movement. To better understand how COVID-19 affects global mobility, IOM has developed a global mobility database to gather, map and track data on these restrictive measures impacting movement. This report provides a global perspective of the COVID-19-related measures and restrictions imposed by countries, territories and areas impacting internal movements, as well as the resulting effects on stranded migrants and other population categories. The information in this report relies on a compilation of inputs from multiple sources, including from IOM staff in the field, DTM reports on flow monitoring and mobility tracking.

Through this exercise, IOM collected information about 176 C/T/As across all IOM regions. Among these, 49 per cent (86 C/T/As) declared a national emergency due to the COVID-19 pandemic and 81 per cent introduced some sort of mobility restriction. Some restrictive measures that have been adopted are quarantine for all international arrivals (63%) and the suspension of the issuance of new visas (41%). On the other hand, some facilitations for stranded populations have also been adopted, such as the automatic extension of expired visas and working permits (30%) and the removal of fines for visa overstays and expired residency and working permits (34%).

Key Locations of Internal Mobility (Internal Transit Points, Areas of Interest, and Sites with Populations of Interest):

- IOM assessed 1,364 key locations across 136 C/T/As, including 373 internal transit points, 396 areas of interest and 595 sites with population of interest.
- Assessed internal transit points and areas of interest were mostly situated in Asia and the Pacific, while the highest number of assessed sites with population of interest were from the East and Horn of Africa and the European Economic Area.
- 51 per cent of the assessed internal transit points were fully operational, with 24 and 22 per cent which were respectively either fully closed or partially operational. Moreover, 50 per cent of the assessed internal transit points had introduced medical measures within the location.
- The most common restrictive measures in place in the assessed areas of interest included the cancellation of public events (57% of the assessed areas), school closure (56%), restricted operating hours for public establishments (49%) and alternative working arrangements (47%). Moreover, non-essential movements outside home were restricted in 33 per cent of the assessed areas while lockdown or quarantine measures were enforced by police or military in 43 per cent of the cases.
- Stranded foreign nationals were reported in 60 per cent of the assessed sites with populations of interest, while in 17 and 15 per cent of cases respectively foreign nationals on their way to their country of origin and IDPs were reported to be present in the assessed sites with population of interest.

I. National-level mobility restrictions

49%

Declared national emergency

81%

imposed significant mobility restrictions

Assessed Internal Transit Points

991

Assessed Areas and Sites

136

Assessed C/T/As

The current COVID-19 pandemic has also affected global mobility in the form of various internal travel disruptions and restrictions. To better understand how COVID-19 affects internal mobility, globally, IOM has included internal transit points as well as assessed areas and sites in the global mobility database. IOM maps and gathers data on the locations, status and restrictions at internal transit points as well as other sub-administrative such as areas of outbreak of COVID-19 or areas under lockdown/quarantine, and sites where populations of interest, such as stranded foreign nationals and IDPs, are particularly affected.

This report provides an overview and analysis on the data from a global and regional perspective, using data updated as of **18 June 2020**.

IOM has assessed a total of 1,364 locations (including internal transit points, areas of interest and sites with population of interest) in **136 countries, territories and areas** so far. The highest share of these assessed locations remained consistent with sites with populations of interest (44%), followed by areas of interest and important internal transit points between cities and regions, with 29 and 27 per cent respectively. More details can be found in Table 1.

Table I: Number (#) and percentage (%) of assessed locations by type and IOM region

Region	Total		Internal transit points		Areas of interest		Sites with population of interest		No. of C/T/As
	#	%	#	%	#	%	#	%	#
Asia and the Pacific	307	100%	115	37%	105	34%	87	28%	24
Central and North America and the Caribbean	79	100%	0	0%	28	35%	51	65%	17

3. Overview of Internal Transit Points

373

Internal Transit Points
assessed in 26 C/T/As

51%

of the assessed internal transit
points are fully operational
(+1 p.p. compared to last week)

50%

of the assessed locations
imposed medical restrictions
(+1 p.p. compared to last week)

Of the **373 internal transit points** (one less than last week's report) monitored in 26 countries, territories or areas, more than 40 per cent had introduced some mobility restrictions and they were either **partially operational (22%**, i.e. no relative change compared to last week) or **fully closed (24%**, i.e. a no change compared to last week's figures). **Fully operational** internal transit points represented **51 per cent** of the assessed locations, implying a 1 p.p. increase on a weekly basis (see Table 4). Moreover, approximately half of the assessed locations (186 out of 373, 50% of the total: i.e. a 1 p.p. increase on a weekly basis) have imposed medical restrictions, such as quarantine or medical screening.

IOM-assessed internal transit points were mostly situated in Asia and the Pacific (31%), South-Eastern Europe, Eastern Europe and Central Asia (29%) and West and Central Africa (26%). Specifically, 67 per cent of the assessed internal transit points were from only four countries: Turkey (81 assessed internal transit points, 22% of the total), Mali (74, 20%), Bangladesh (50, 13%) and the Philippines (44, 12%). The operational status of the assessed internal transit points appears very different across the abovementioned regions with a significant share of fully closed locations in Asia and the Pacific (43% of the assessed internal transit points in the region, i.e. no change compared to last week's figures) compared to 74 per cent of the assessed internal transit points that were fully operational in West and Central Africa (73 out of 98, i.e. no change on a weekly basis). In South-Eastern Europe, Eastern Europe and Central Asia, 73 per cent of the assessed internal transit points were fully operational (78 out of 107, all situated in Turkey) while the rest were either partially operational (17%) or fully closed (10%). For more information, please refer to Table 4.

In 212 out of the 373 assessed internal transit points (57% of the total, i.e. no relative change compared to last week), the foreseen duration of the restrictions was unknown (i.e. information was unavailable). In 24 and 16 per cent of the cases the restrictions will be in place for 14 days to one month or less than 14 days, respectively. Only in 12 internal transit points (3% of the total), the restrictive measures will be valid for more than one month.

These restrictions had an **impact** on all categories of population (for more details, see Table 5), especially on **regular travelers** and **nationals** (affected in respectively in **76%** and **74%** of the assessed locations). **Irregular migrants** (in **37%** of the assessed internal transit points), **returnees (32%)** and **IDPs (19%)** have also been affected by the abovementioned restrictions. Finally, a less significant impact has also been reported on **migrant workers** (in **11%** of the assessed locations) and **refugees (4%)**.

3. Overview of Internal Transit Points

Operational status of the assessed internal transit points

- Fully closed
- Fully operational
- Partially operational
- Other

Percentage of internal transit points with affected population

Percentage of Internal Transit Points

Global map of assessed internal transit points and their operational status

3. Overview of Internal Transit Points

Public Health Measures

The following public health measures were reported to be in place in assessed internal transit points through IOM’s missions participating in this exercise (for further information, see Table 6).

On risk communication and community engagement at the assessed internal transit points, 59 per cent of the assessed locations (130 out of 221 identified internal transit points) reported that information on COVID-19 was provided to travelers at the site through leaflets, posters or announcements. Additionally, in 125 out of 219 identified locations (57% of the total) handwashing stations were available as an infection prevention and control measure.

Health screening using non-contact thermometers was reported at almost all identified internal transit points (113 out of 120 locations recording a response, 94% of the total). However, only 10 out of 119 assessed internal transit points (8% of the total) reported that there was infrastructure in place to support crowd control and ensure safety of screeners.

For the detection, management and referral of ill travelers, standard operating procedures were reported to be in place at 21 per cent of identified internal transit points (49 out of 233 locations recording a response), while a referral system was reported to be in place at only 28 out of 220 specified internal transit points (13% of the total). Finally, only 15 internal transit point had reliable information regarding the availability of an isolation space for suspected COVID-19 cases, prior to their appropriate referral (15 out 222 assessed internal transit points, 7% of the total).

Maintaining and enhancing these public health measures and interventions across various levels (e.g. local, national, regional) can facilitate the detection, assessment, and notification or reporting of events that can together contribute to prompt and effective responses to public health emergencies such as COVID-19.

Public health measures in place in the assessed locations

Available tools/measures in the event of a COVID-19 case at the site

4. Overview of Areas and Sites of Interest

4.1. Areas of Interest

396

areas assessed
in 74 C/T/As

27%

of the assessed areas are located in
the IOM region of Asia and the Pacific

57%

of the assessed areas have
restrictions on public events

In total, 396 (a 1% increase from the previous week) areas of interest were assessed in 74 countries, territories and areas. These areas were chosen from sub-administrative units of interest, such as areas of outbreak of COVID-19 or areas under lockdown/quarantine. Assessed areas consisted of cities, towns and regions. Cancellation of public events, school closures, restricted operating hours for public establishments and alternative working arrangements can be listed as restrictive measures imposed in these areas.

Among the regions, the IOM region of Asia and Pacific continued to have the highest share of assessed areas (105 out of 396 assessed areas or 27%), closely followed by the IOM region of European Economic Area (79 out of 396 assessed areas or 20%). The IOM region of Middle East and North Africa followed with 14 per cent and the IOM region of South-Eastern Europe, Eastern Europe and Central Asia had 12 per cent of the assessed areas. Regional distribution of the assessed areas of interest has showed very minor changes compared in the last month.

The type of restrictive measures being imposed on the assessed areas varied. In 57 per cent of assessed areas (224 out of 396 assessed areas) public events were cancelled or postponed. Schools were closed also in almost 56 per cent of the assessed areas (220 areas, almost 5% increase from the previous week). Restricted operating hours for public establishments (café, restaurant, etc.) and alternative working arrangements (working remotely, etc.) were in place in 49 and 47 per cent of the assessed areas respectively (193 and 185 areas respectively). Movement outside home was restricted in 33 per cent of the assessed areas while lockdown or quarantine measures were enforced by police or military in 43 per cent of them (131 and 172 assessed areas respectively). Percentages of assessed areas with certain restrictions have not demonstrated any significant change in the last month. In the majority of areas (53%), the expected duration of restrictions was 14 days to one month, followed by one to three months and less than 14 days (6% of the cases for both). However, in 34 per cent of assessed areas, the expected duration of restrictions was unknown.

Number and type of restrictions in areas of interest by IOM region

- Public events cancelled or postponed
- Schools closed
- Restricted operating hours for public establishments (café, restaurant, etc.)
- Alternative working arrangements (work remotely, etc.)
- Restricted movement
- Lockdown/quarantine enforced by police or military

4. Overview of Areas and Sites of Interest

4.2. Sites with Populations of Interest

595

sites assessed
in 111 C/T/As

20%

of the assessed sites are located in the
IOM region of East and Horn of Africa

60%

of the assessed sites have reported
cases of stranded foreign nationals

In total, 595 (4% increase compared to the previous week) sites were assessed in 111 countries, territories and areas. These sites were selected as they concern populations of interest such as stranded foreign nationals and IDPs. Hotels, temporary reception centers, camps, transit centers and detention centers can be given as examples of assessed sites.

Affected population groups consisted of stranded, repatriated and returning migrants, IDPs, asylum seekers and regular travelers. In 60 per cent of the assessed sites with populations of interest, foreign nationals were stranded (357 out of 595 assessed sites, almost 7% increase compared to the previous week) and in 17 per cent of cases there were foreign nationals reported returning to their country of origin (100 sites) while in 15 per cent of cases, IDPs were affected by restrictive measures (91 sites). In 6 per cent of the sites, nationals were affected by restrictive measures and in 2 per cent, there were other affected population groups including migrants and refugees that were in reception centers before COVID-19 (34 and 12 sites respectively).

Among the regions, both IOM regions of East and Horn of Africa and European Economic Area had the highest proportion of sites (20% and 18% respectively). IOM region of European Economic Area had the highest proportion of sites with stranded foreign nationals in the country (29%), followed by the IOM region of South-Eastern Europe, Eastern Europe and Central Asia with 16 per cent. IOM region of Asia and Pacific has the highest proportion of sites with reported cases of nationals returning to their country of origin (39%) followed by IOM Region of Central and North America and the Caribbean with 23 per cent while IOM region of East and Horn of Africa has 56 per cent of the sites with reported cases of IDPs. The IOM Region with the highest proportion of affected nationals was East and Horn of Africa with 21 out of 34 assessed sites (62%).

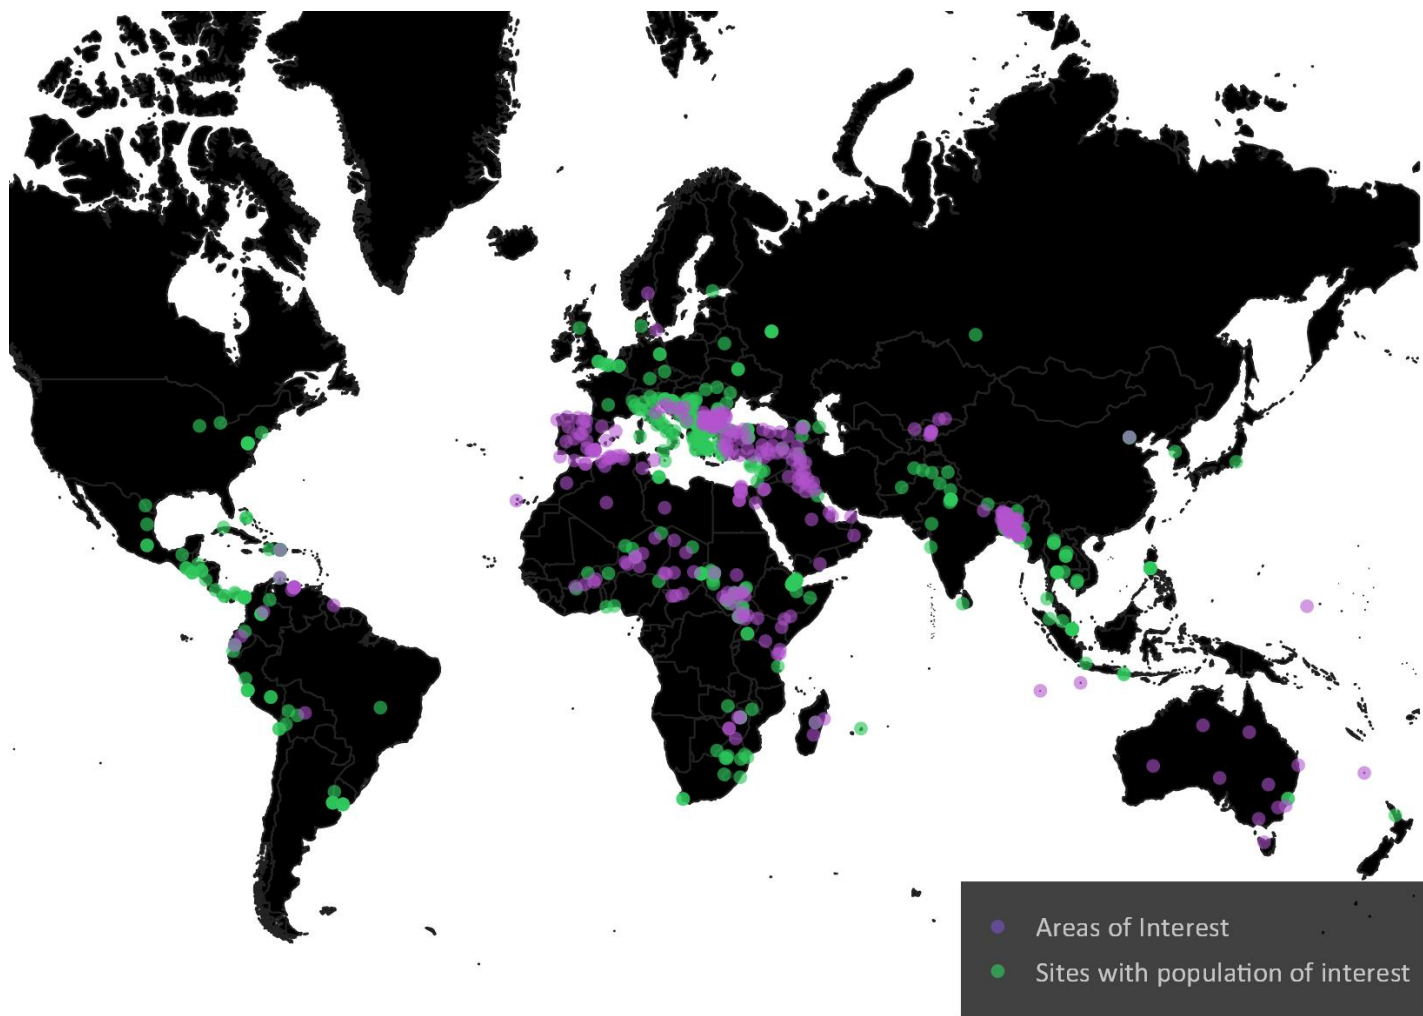

A within region analysis can be also conducted in order to investigate the distribution of sites with populations of interest in certain regions. In the IOM region of European Economic Area, 94 per cent of assessed sites had reported cases of stranded foreign nationals, 45 per cent of the sites in both IOM region of Asia and Pacific and the region of Central and North America and the Caribbean separately had cases of foreign nationals returning to their country of origin while IOM region of East and Horn of Africa had reported cases of IDPs in 43 per cent of the assessed sites in the region. The change in the total number of sites was mainly driven by the increase in the number of sites with reported cases of stranded foreign nationals. Especially, sites with foreign nationals stranded in the IOM region of Southern Africa showed an important increase with 11 additional sites.

Number of sites with population of interest disaggregated by population categories and IOM region

4. Overview of Areas and Sites of Interest

Annex: Tables

Table 7.2: Duration of restrictive measures in areas of interest

Duration	No. of Areas of interest	Percentage
1 - 3 months	20	5%
14 days to One month	210	53%
Less than 14 days	22	6%
More than 3 months	6	2%
Specific Date	2	1%
Unknown	136	34%
Total	396	100%

Table 8: Affected population categories in sites with populations of interest

Affected population categories	No. of Sites of interest	Percentage
Foreign national returning (on the way) to origin (Returnee/Repatriation/Deportation...)	100	17%
Foreign national stranded in country (Stranded)	357	60%
IDPs	91	15%
Nationals	34	6%
Other	12	2%
Unknown	1	0%
Total	595	100%

Table 8.I: Number (#) of sites disaggregated by population categories and by IOM region
