**HIGHLIGHTS**

**NUMBER OF COVID 19 CASES**
- 60

**NUMBER OF DEATHS**
- 2

**NUMBER OF RECOVERIES**
- 2

- **Airports**: 1 out of 12 open
- **Sea Ports**: 7 out of 8 open
- **Border Crossing**: 4 out of 21 open
- **Isolation Centers**: 14 across Somalia
- **Emergency Operations Center**: 7 Centers Open

---

**OBSERVED MOVEMENTS – FLOW MONITORING**

In March 2020, a total of **28,859** movements were observed at various Flow Monitoring Points (FMP) across Somalia. Bosasso (29%), Buuhoodle (19%) and Harirad (16%) contributed to the highest inflows for the month while Bosasso (34%), Doolow (28%), Dhobley (15%), Buuhoodle (13%) recorded the most outflows.

In addition there were more outflows than inflows at the Doolow FMP and conversely more inflows than outflows at the Haridad FMP.

**MOVEMENTS OBSERVED BY FMP**

**MIGRANTS AGED 60 OR ABOVE**

In total 175 out of 5,940 persons were 60+ years old, which is equivalent to 3%.

**SUMMARY AND OVERVIEW**

Between March 22 and March 31, DTM collected information to monitor the specific vulnerabilities related to coronavirus among migrants. 266 instances of chronic diseases were self-reported. Importantly, a migrant may present more than one chronic disease.

Of the self-reported conditions, chronic respiratory diseases represented 17%, diabetes (36%), cardiovascular diseases (5%), hypertension (37%), cancer (2%), immunity deficiency (4%). Migrants reported the highest levels of chronic diseases in Togdheer (42% of reported diseases), Awdal (23%) and Bari (15%).

12% of the groups interviewed were aware of the coronavirus pandemic. Interviewees who reported not knowing about Covid-19 were offered an awareness session by trained enumerators utilizing posters in Somali, Oromo, Amharic, Arabic and English.

**AWARENESS OF CORONAVIRUS ACROSS ALL AGE GROUPS**

- No: 88%
- Yes: 12%

* Corona virus related data was collected between March 22nd to March 31st with a revised Flow Monitoring Registry tool (see methodology section).*
**MOVEMENTS TRENDS**

**MAIN COUNTRIES OF ORIGIN AND INTENDED DESTINATION**

**INCOMING**
- Ethiopia: 10,419
- Somalia: 13,998

**OUTGOING**
- Democratic Republic of the Congo: 36
- Djibouti: 828

Somalia: 14,881
- Ethiopia: 8,157
- Kenya: 1,876
- Sudan: 35
- Yemen: 3,925

Incoming flows: recorded originated from Ethiopia (10,419 observations or 74%), Kenya (1,212 or 9%), Djibouti (964 or 7%) and Yemen (35 or 0.3%). In addition, 1,368 of the movements observed (or 10%) as entering Somalia also originated from Somalia; this is likely due to difficulties to travel within Somalia, as well as relative ease of transportation through neighboring countries and shorter distances.

Outgoing flows: for the month of March 2020, a total of 14,861 movements have been observed as exiting Somalia. Main countries of intended destination for outgoing flows are Ethiopia (8,157 or 55%), Yemen (3,925 or 26%), Kenya (1,876 or 13%), and Djibouti (815 or 6%).

**MOVEMENTS OBSERVED BY TYPE OF FLOW AND REGION**

- Bossaso: 29%
- Buuhoodle: 13%
- Cabudwaq: 3%
- Dhobley: 15%
- Doolow: 28%
- Harirad: 2%
- Lowyacado: 10%

Total Children: 35%

VULNERABILITIES

A total of 6,115 vulnerabilities were reported in March 2020. Vulnerabilities may be overlapping since individuals may have more than one vulnerability. The following percentages are calculated on the total number of observations for this month:

- Children under 5: 8%
- Elderly (60+): 5%
- Pregnant and Lactating Women: 5%
- Physical disability: 2%
- Unaccompanied children: 1%

- Foot: 7%
- Animals: 5%

*Data from FMS, which is based on a sample (1244 respondents) of the total movements observed. Data are not representative and should be interpreted with caution.

**Data from FMS based on 303 respondents out of 1244 who reported to have faced difficulties during the journey.
METHODOLOGY

The purpose of flow monitoring is to provide regular and updated information of the size and profile of population movements. The information and analysis provided by flow monitoring also aims to contribute to improved understanding of shortcomings and priorities in the provision of assistance along the displacement/migratory routes. Flow monitoring methodology consists of three basic steps:

• **High Mobility Area/Location Assessments**: aimed at mapping locations of high mobility to establish where to set up Flow Monitoring Points (FMPs) through key informant interviews;

• **Flow Monitoring Registry (FMR)**: aimed at capturing quantitative data about certain characteristics such as the volumes of migrants, their nationalities, sex and age disaggregated information, their origin, their planned destination and key vulnerabilities. This is done by enumerators at the FMPs;

• **Flow Monitoring Survey (FMS)**: aimed at capturing qualitative information about the profiles of migrants, migration drivers and migrants’ needs. This is done through interviews with a sample of migrants passing through the FMPs.

Movement Categories

• **Outgoing/Exiting Migrants**: migrants originating from and travelling out of the country where the FMP is located. Nationality is irrelevant.

• **Transiting Migrants**: migrants travelling through the country where the FMP is located, where both departure point, and the intended final destination, are not the country of FMP. Nationality is irrelevant.

• **Incoming Migrants**: both entering (non-nationals of the country with the FMP) and returning (nationals of the country with the FMP) migrants, where the intended destination is the country containing the FMP.

• **Internal Migrants**: where both the departure and the destination country are the country with the FMP. This includes circular migration.

LIMITATIONS

Data collected for this exercise (from FMR and FMS) should be understood as indicative observations at FMPs. They represent only part of the total flows passing through Somalia. DTM Somalia has 7 cross border flow monitoring points, which is not exhaustive of all cross-border roads that migrants may use. In addition, although data is collected daily, it is collected only during peak hours. The spatial and temporal coverage of this data collection activity is therefore incomplete. However, it provides information on the situation at assessed points and allows to make hypothesis on the overall situation. In addition, having collected flow monitoring data consistently in the past years, historical data offers the possibility to observe trends and make comparisons. Data on vulnerability is based on direct observation and should be understood as mainly indicative. FMS data is based on a sample of the total movements observed and therefore it should be interpreted with caution.
